Up to now...

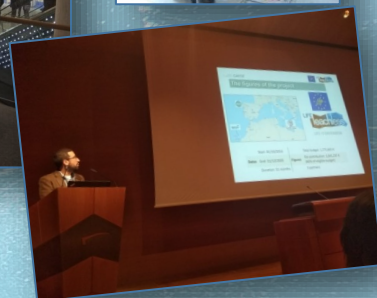

The **demonstration plant** of the project is in the installation stage.

During the months of September and October the LIFE LEACHLESS project was presented in several scientific events organised by various universities. In September it attended the **XXXVI National Conference on Chemical Engineering** in Zaragoza (Spain) and in October it was the **researchers' night** in Athens (Greece).

On 7, 8 and 9 October, we were present at the **ISWA World Congress 2019** held in Bilbao (Spain). There, we had the opportunity to present the results obtained in the preparatory actions of the project. The presentation aroused great interest among attendees representing waste generating organisations, as well as managers of landfills and waste treatment plants.

Next...

In the coming months of 2020 the **demonstration plant** will have already passed the start-up stage and will face the operation stage in the Zonzamas complex (**Lanzarote**).

In November we will go to **ECOMONDO** in Rimini (Italy). ECOMONDO is an international fair with an innovative format that brings together all sectors of the circular economy on a single platform: from material and energy recovery to sustainable development.

We will start the year 2020 by attending the **MAKING WATER FIT FOR LIFE** event in Barcelona (Spain), on January 29 and 30. This is a LIFE Platform meeting on waste water treatment.

If you are a **follower**, we need you! If you belong to a facility where leachate is generated or a ceramic company, we want to know your opinion. LIFE LEACHLESS invites you to participate as an observer of the project. Please fill in the questionnaire on our website.
