leachless

Water reclamation with
zero waste
technologies...

www.lifeleachless.eu

Up to now...

After several months and after overcoming various logistical problems, the demonstration plant arrived in **Greece** and is currently being **installed** at the second demo site of the project, the **Ano-Liosia landfill** in Athens. Therefore it is expected that in a few weeks the plant will start operating at the landfill site.

The project continues with the parallel development of the different **Implementation Actions**, as well as with the Monitoring Action and the **environmental assessment**. Finally, the implementation of the strategy developed for the monitoring of the **socio-economic impact** of the project will start in the coming days.

Next...

The **operation** of the demonstration plant at the **Ano-Liosia landfill** will start in the coming months. The results of this activity will provide the necessary information to finalise the last actions of the project.

The project continues to make progress and now more than ever we need you as a **follower**! If you belong to a facility where leachate is generated or to a ceramic company, we want to know your opinion. **LIFE LEACHLESS** invites you to participate as a project observer. Please fill in the questionnaire on our website **www.lifeleachless.eu**.
