LIFE

leachless

The effective technological  
solution for landfills and treat-  
ment centres...

[www.lifeleachless.eu](http://www.lifeleachless.eu)

## Up to now...

The demonstration plant continues to operate at the **Ano Liosia (Athens)** landfill site with the aim of gathering information on the performance of the process in the treatment of leachate from different sources.

The project is also continuing its work on the other **Implementation Actions** such as replication plans, analysis of the possible uses of the final products, future market assessment, etc.

Regarding the Impact **Monitoring Actions** of the project, we are currently carrying out the final part of the environmental assessment with the information collected at the Athens demo site and we have also launched questionnaires on our website for the followers of the project to help us assess the socio-economic impact of the project.

## Next...

After a **long journey**, the project is now in its final stretch. In the next few months, the ongoing actions will be finalised and the **final** picture of the **results** obtained will be taken.

In the final part of the project the **last activities** of the project will be planned, such as the dissemination of the final results, the Layman Report or the planning of the Post-LIFE project plan.

The project again needs the help of its **followers**. Therefore, if you are a landfill or waste treatment centre manager, we ask you to help us assess the **socio-economic** impact of the project by answering a simple questionnaire. Please fill in the **questionnaire** on our website [www.lifeleachless.eu](http://www.lifeleachless.eu) and we will of course keep you informed of the results and information that may be of interest to you.
